Overview:

Important Terms:

Login Node (**submit0**): Used for submitting jobs ONLY. Running code or applications from submit0 is prohibited.

Compute Node (**compute300-305**): Resource nodes that jobs are run on

LIBR's analysis cluster, christened "c3", consists of 1 login node and 6x Dell PowerEdge R750 servers acting as compute nodes. Each compute node has 2x Intel Xeon Gold 6342 CPUs, 1 Terabyte (TB) of RAM, and 1 NVIDIA A40 GPU, providing users with access to a combined total of 288 cores (576 threads), 6TB RAM, and 6 A40 GPUs. Data and applications are served over NFS shares on 40Gbps connections.

Various software are used to access the hardware and software, including Slurm and Imod. More info on these software titles can be found in the sidebar.
